

Welcome to your final project assessment!!!

We had a fantastic session exploring concepts related to Machine Learning, Computer Vision, and Natural Language Processing. Now it is time for assessment!!

For assessment, you need to do two projects out of three given projects. The projects related to three concepts as below:

- 1) Machine Learning (Compulsory)
- 2) Computer Vision (Optional)
- 3) Natural Language Processing (Optional)

You must do the Machine Learning project as it is compulsory. From Computer Vision and Natural Language Processing, you must choose one project. **In short, you need to do two out of three projects where the Machine Learning project is mandatory.** Each project has a dataset and a PDF file describing the project. Read the PDF file carefully and do the project.

Before doing the project, Please download the Folder on your local PC (and reupload it in your drive.)

After doing the projects:

- 1) You should submit the .ipynb file.
- 2) Please include sufficient comments to make reading the code easier for the reviewer.
- 3) Make your code clean and remove all the unnecessary parts from the code (**Clean code is a must to have a good impression**)
- 4) Please don't remove any output; the reviewer needs to see your output.

The project submission **deadline is 4th October.**

We will share further instructions on how to submit your code.

Till then, Have a great time coding.
